How to Develop a Survey in Qualtrics Anna Holt

Qualtrics is one of the premiere survey and user-experience (UX) design tools currently on the market. It is the most frequently used tool in academic research spaces, in particular, because it is available free of charge to most university students, faculty, and staff.

Types of Two-Factor Identification

A list of common two-factor identification types.

Working with Qualtrics begins by logging in, typically to a web portal. This step will vary depending upon the home institution. Most universities, for instance, will use a form of two-factor authentication and additional screening from a university-internal domain. Qualtrics easily handles most common two-factor authentication types including:

- Duo Mobile
- Google Authenticator
- SMS-based Authentication
- Email Authentication

Logging in to Qualtrics differs enough at each institution that it is outside the scope of a basic user's guide. Follow institution-specific technical guides specific to each use-case.

Question Details

A table of survey question details

Qualtrics easily handles most common survey question types including:

Question Type	Description from the Qualtrics Website of What the Question Type Commonly is Used For
Multiple Choice	Multiple choice questions form the basis of most research. They can be displayed as a traditional list of choices or as a dropdown menu, select box, etc.
Open-Ended Text	Text entry is used to gather open-ended feedback from respondents. These responses can be lengthy essays or short text.
Matrix Table	Matrix table is used to collect multiple pieces of information in one question. This type provides an

	effective way to condense your survey or to group similar items into one question.
Slider	Sliders let respondents indicate their level of preference with a draggable bar rather than a traditional button or checkbox.
Form Field	Gather standard form information such as name and email address.
Rank Order	Rank order is used to determine each respondent's order of preference for a list of items.
Side-by-Side	Side by side questions let you ask multiple questions in one condensed table and provides an effective way of shortening your survey while gathering the same amount of data.
Net Promotor Score	NPS® tracks customer loyalty with one simple, standardized question: "On a scale from 0-10, how likely are you to recommend our company to a friend or colleague?"
Timing	This hidden question is used to time—as well as limit—how long participants spend on a page of the survey.
Graphic Slider Likert	This variation of the slider question has respondents use various graphic options, such as changing a frown to a smile or choosing a grade, to indicate their level of preference.
Pick-Group-and Rank	Pick, group, and rank is used for sorting activities. Respondents place items into groups and have the option to rank the items within the group.

The basic instructions for setting up a survey do not differ markedly by question type.

Survey Instructions

Core Instructions for Logging in to Qualtrics for the First Time.

Instructions for Logging in to [Qualtrics](#) for the First Time

Seeking feedback and upfront information about how a product or service is working - or is intended to work - can save hours of troubleshooting and service updates later. Creating a survey is quick and easy in Qualtrics.

While initial instructions differ by institutions for how to log in to Qualtrics, once logged in to the platform the overall procedure for developing a new survey is quick and easy. It does not differ by licensing institutions or authentication types.

1. From the landing page, click on "Create a Survey."

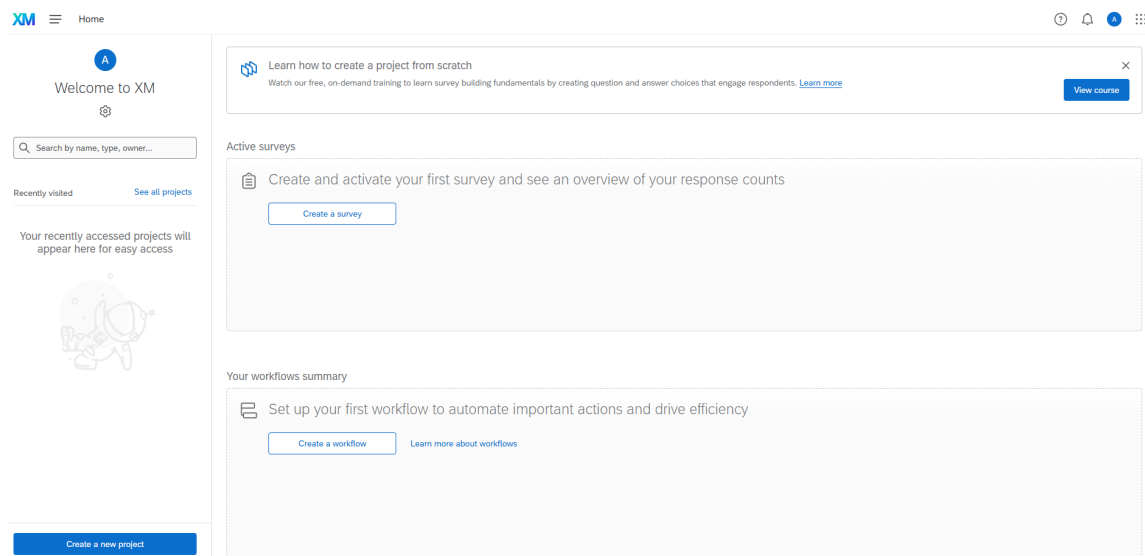

Figure 1: Qualtrics User Landing Page

2. The first time you log in as a new user, there will be a short user tour. Click "next" at each stage (if applicable) to be introduced to a snapshot of this guide.
3. After completing the tour (if applicable), click on "Survey" under "From Scratch." Then click "Get started."
