

Final Project

By Benjamin Fortier

The Tool I Learned the Most About Is...

GitHub

- Went from beginner to intermediate user (sometimes, making mistakes is your biggest teacher)
- Used GitHub desktop, Visual Studio Code, and the integrated GitHub plugins in software like Oxygen XML
- Interesting, vital, but SCARY “real world” implications
- “Tread lightly”
- Communication is key with the repository owner
- Equally the most interesting and least favorite tool, hands down

Most Interesting Tools

- Oxygen XML Author
- Madcap Flare
- Notepad ++
- SnagIt
- Light weight markup/Markdown (Visual Studio Code)

Portfolio & Future

Mainly created in Microsoft Word or Scrivener

Hosted on Wordpress

Divided into technical and creative

Most signature documents came from the previous portion of this course

I'm following the "things laid out before me" path - right now, that is creative stuff (currently working as a writer for a documentary)

Will certainly be utilizing skills and software learned throughout this course

Closing Thoughts

Overall, the MCC Technical Writing Certification has honed skills I've used in both my creative and IT endeavors, as well as exposed me to software and tools I had not previously known about. This has been a great experience and I'm glad to have this knowledge as part of my "tool belt."

Thanks to the instructors and class mates. *Best of luck wherever you land!*
